Summary

Software Engineer with 3+ years of experience building scalable backend systems for fintech and edtech platforms. Specialized in Node.js/NestJS microservices, secure authentication and authorization, event-driven processing with Redis and BullMQ, and third-party KYC, identity-verification, and banking integrations. Owns services end to end — system design, API contracts, and production reliability — with full-stack depth in React and TypeScript.

Professional Experience

LNVS Fintech | *Software Engineer III*

08/2025 – Present

Promoted from Software Engineer; internal transfer from Raghvi Finance (Surya Loan)

- Architected a **Node.js (NestJS)** platform of 20+ microservices, migrating legacy **PHP** loan workflows into independently deployable services now processing **100,000+** loan applications per month.
- Implemented a secure **User Management Service** with authentication, **role-based access control (RBAC)**, and session management via **guards, interceptors, and middleware**, securing endpoints across **25+** roles.
- Designed the **Lead** and **Common** services powering end-to-end loan processing, integrating **30+** third-party **APIs** for **KYC verification, bank statement analysis, and SMS delivery**.
- Automated background processing with **Redis and BullMQ** using job queues, retries with backoff, and distributed locking.
- Shipped **identity verification** covering **Face Match, Video KYC, liveness detection**, and geolocation checks via **AWS Rekognition** and **Google Maps APIs**, cutting KYC turnaround by **50%**.
- Developed the frontend architecture in **React** and **Redux-Saga**, delivering reusable components that reduced feature integration time by **40%**.

Cerebry | *Software Engineer*

07/2023 – 08/2025

- Created **25+ interactive question types** (audio input, drag & drop, algebraic entry) using **Preact, JavaScript, Node.js**, and **SCSS**, expanding the adaptive practice experience for students.
- Deployed a **Node.js** microservice on **AWS (EC2 and Lambda)** rendering Markdown and converting HTML to images with **Playwright**, serving **million** renders per day.
- Integrated **50+ frontend components** with backend APIs using **React, Redux**, and **Axios**, resolving production UI/UX defects that improved page load times by **15%**.

Technical Skills

Languages: *TypeScript, JavaScript, C/C++, Python, PHP, SQL*

Backend: *Node.js, NestJS, Express.js, Django, REST APIs, Microservices, Redis, BullMQ, WebSockets, JWT, RBAC*

Frontend: *React.js, Next.js, Redux, Redux-Saga, Preact, Tailwind CSS, SCSS, Bootstrap*

Databases & Cloud: *MongoDB, MySQL, Redis, AWS (EC2, Lambda, Rekognition)*

Tools & Practices: *Git, Linux, Puppeteer, Playwright, Figma, System Design, Design Patterns*

Projects

Remaining Useful Life Predictor | *Python, CNN-LSTM, SVM, Regression, Express, React* | GitHub **11/2023 – 04/2024**

- Trained a **CNN-LSTM** model on **100,000+ data points** of tool telemetry, covering cleaning, feature extraction, and hyperparameter tuning.
- Achieved **93% prediction accuracy** on remaining-useful-life estimation, surfaced through a React and Express dashboard.

GB-Scraper | *Next.js, Node.js, Express.js, MongoDB, Socket.IO, Puppeteer* | GitHub

05/2023 – 06/2023

- Engineered a search-aggregation platform scraping Google and Bing results with **Puppeteer**, streaming live progress over **Socket.IO**.
- Secured the service with **JWT authentication**, password hashing, **CSRF protection**, and query rate limiting, capping load under concurrent scraping jobs.

Education

Indian Institute of Information Technology, Jabalpur

09/2021 – 05/2025

Bachelor of Technology in Computer Science and Engineering

CPI: 8.8 / 10

Achievements

- Led a **7-member** backend team for **FusionIIIT**, the institute-wide ERP platform serving IIIT Jabalpur.
- Competitive programming: **global rank 231** in CodeChef Starters 152 (Div 3) and **global rank 3130** in Codeforces Round 882 (Div 2); LeetCode **1657** / CodeChef **1636** rating, 500+ problems solved.
